

Building PPP for the provision of ICT access for disadvantaged communities

UNESCAP Expert Group Meeting
12-14 December, 2007, Bangkok

Harsha de Silva
Lead Economist, LIRNEasia

-
- Keep to the focus of “building partnership for the provision of ICT access”
 - ICT access is not only how to sustain a telecentre
 - Discussions on the importance of building partnerships for sustaining telecentres has already happened here
 - Focus is on connectivity infrastructure and financing
 - eBarrio gets free connectivity?
 - India’s proposed 100,000 CSC gets free connectivity?
 - What is “free service” stops; fear in Orissa?

Plan of presentation

- ☐ Some facts
- ☐ Current status of ICT access
- ☐ Public-Private Partnerships
- ☐ Strengthening PPP
- ☐ Role for ESCAP and others

Some facts in the developing world

Fact

- ❑ Budgetary constraints
 - Cut 'development' expenditure
- ❑ Infrastructure
 - Reduced availability
 - For disadvantaged communities; sometimes not available

Fact

- ❑ Public sector
 - Development objectives
 - But, many instances; low quality service delivery
- ❑ Private sector
 - Profit objective
 - “Better”, “cheaper”

Fact

□ PPP

- contractual agreement between a public and a private sector entity whereby the private entity commits to provide an identified public service
- If designed and implemented properly, can produce “win-win” outcomes

Motivating factors for PPP

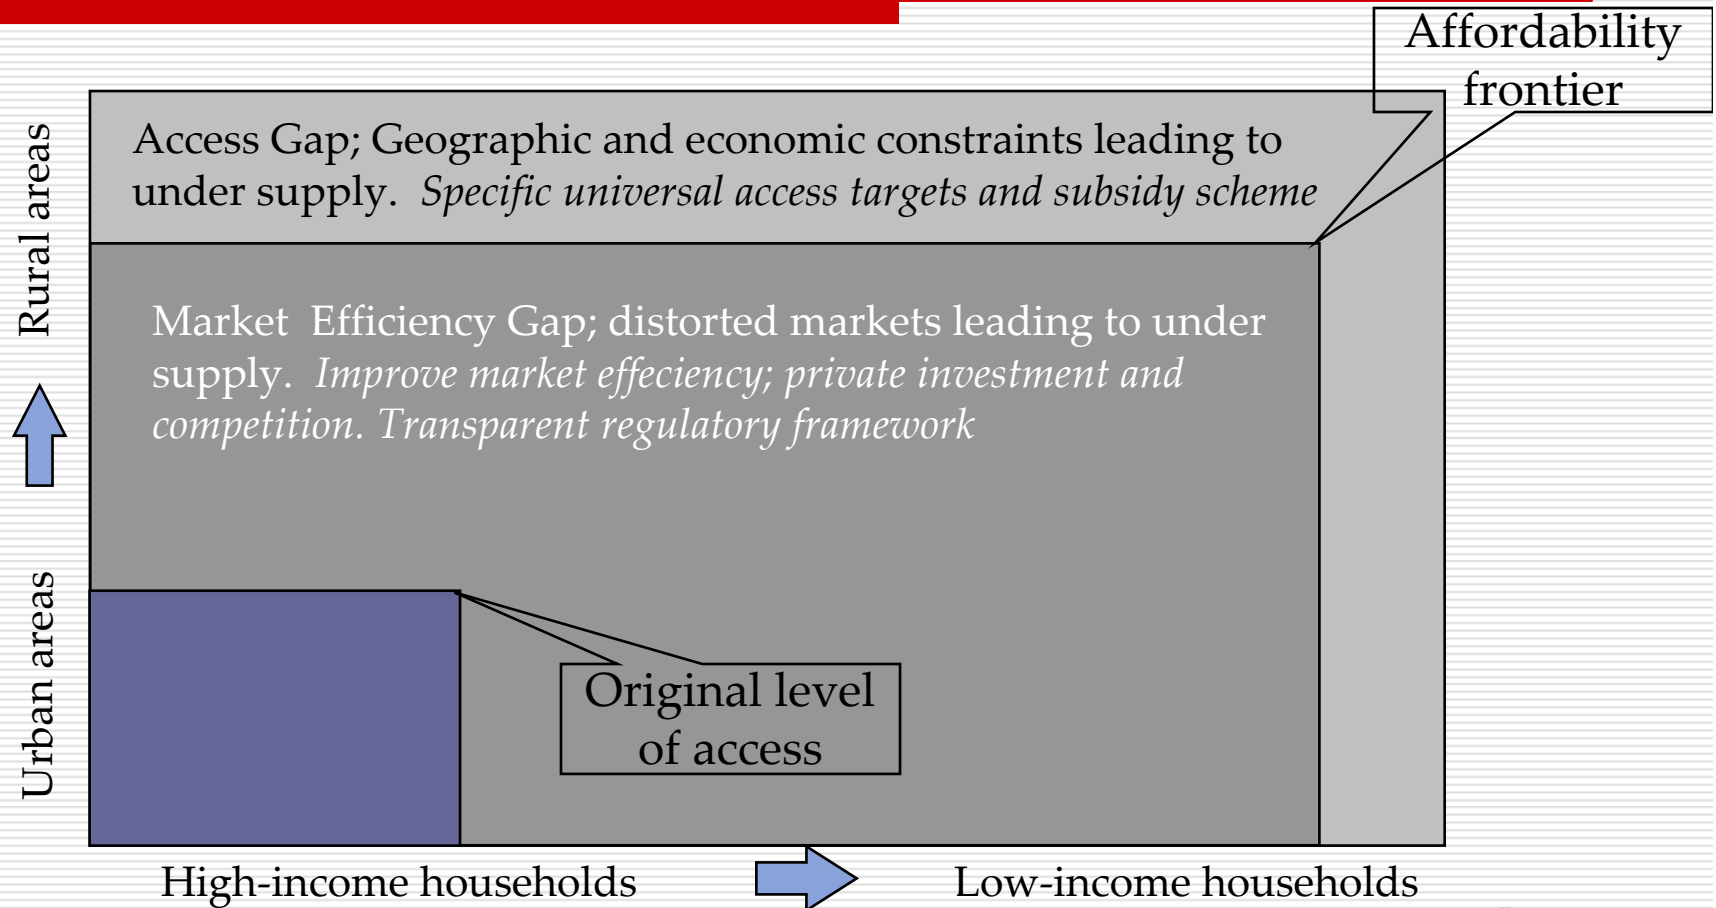

- ❑ Reduce budget allocations
- ❑ Improve availability and service of [public] infrastructure
- ❑ Mobilize private sector expertise
 - Design and construction
 - Management and operations
 - Structuring financing
- ❑ Better risk allocation
- ❑ Utilize limited public funds to better meet development objectives
 - Telecom connectivity? Polio vaccination?

Current Status of ICT Access

Focus is **only** on infrastructure; connectivity both backbone and last mile

What is “totality of the access gap”

Mobile phones per 100 inhabitants

as at end FY 2006

Notes: India on an April – March reporting period ; Pakistan on a July – June reporting period; Other countries follow Jan – Dec (calendar year) reporting periods; Philippines Year 3, 4, 11, 12 are calculated numbers assuming average uniform growth (or decline) due to unavailability of data. Sources: India-TRAI; Thailand-Company Reports; Pakistan-TRA; Philippines-NTC; Sri Lanka-Company reports; Indonesia-1999 from DGPT, 2000 onwards from company reports

India

Source: TRAI, COAI, AUSPI

- Fierce competition in mobile sector; market entry and price. Not so in fixed;
 - Late 2002 forbearance of mobile tariffs → free fall; mobile = fixed by 2005
- Effective regulator [TRAI]
 - USO and ADC damper; now overcome

Pakistan

Source: PTA

Harsha de Silva, LIRNEasia, 13 December 2007

- Strong competition in mobile sector post 2003 reform; but not so in fixed
 - Fixed still 98% incumbent; recently privatized, spike after WLL entry 17 issued, 4 operational
 - Mobile 4 main players, several others. 100% foreign ownership
- Liberalization along the lines of text book; regulator established, competition increased, incumbent privatized
- Effective and transparent regulation; credibility

Indonesia

- Fairly high competition in mobile; limited in fixed
- Regulator setup long after opening up and privatizations
- Every time new entrant, or threat of such → growth
- Racing for new territory

Source: 1999 from DGPT, 2000 onwards from company reports

Thailand

Source: Company reports

- Up to 2000 no effective competition → lackluster growth
 - Fixed: *reached* limit
 - Mobile: collusion
- 2000-01 entry of new disruptive competitors
 - Spectacular growth
 - Price war
- Still serious regulatory issues
 - Concession agreements override authority; SOE not within competition law etc.
- Political backlash of sale of mobile operator; foreign ownership issues?

Story so far...

- ❑ Closing the market efficiency gap
 - Moving the pre-reform frontier out towards the affordability frontier
- ❑ What about the access gap
 - Is the access gap static?
 - Answer is two-fold
 - ❑ Improving technology → cheaper service; supply push → rural to remote
 - ❑ Innovative business models → improved “demandability” [Prof. Dinesh Chapagain] or demand pull

Professor C K Prahalad

- “If we **stop thinking of the poor as a burden** and start recognizing them as **value conscious consumers**, a whole new world of **opportunity** will open up”
 - The Fortune at the Bottom of the Pyramid: Eradication Poverty Through Profit
 - Is this “vested interest”? [Mr. Debi Prasan Patnaik]
- Evidence
 - Increasing profitability of Telcos serving more and more rural poor
 - Declining ARPU
 - Surveys at the BOP

Mid-2006 Survey by LIRNEasia

India, Pakistan, Sri Lanka, Philippines, Thailand

Quantitative

Random sample 8,660 F-to-F interviews; in 5 countries
(India 4,000) 50% diary

Qualitative

6 Focus Group Discussions per country (30)

Final output

The “Bottom of the Pyramid”

- Many definitions of poverty, here SEC D and E; between ages 18-60

	Pakistan	India	Sri Lanka	Philippines	Thailand
Population (million)	165	1,095	20	89	64
Target population of study (million)	77*	260	4**	41	15

Overall access is very high

Accessibility <i>(used a phone in the preceding 3 months)</i>	South Asia			South East Asia	
	Pakistan	India	Sri Lanka	Phils.	Thailand
	98%	94%	92%	93%	95%

Most can get to a phone in 5 minutes

But, ownership is low

So, share phones

What about the “Internet”?

Dr Doojin Choi: Korea 90% high-speed access

	Pakistan	India	Sri Lanka	Philippines	Thailand
Use the Internet Urban; Rural	0% 3.0;0.7	0% 0.2;0.1	1% 2.1;1.4	9% 12.8;4.3	10% 22;2.3
Not heard of Internet	36%	72%	29%	14%	36%

Access frontier is changing fast

□ 1999

- UN Secretary General Kofi Annan at ITU Telecom "Half the world's people have never made or received a telephone call"

□ 2007

- Seems like centuries ago...
- Or is it?

But **some access gap** remains

- ❑ PPP → a possible way to address the shortfall
 - ❑ Mr Debi Prasan Patnaik; 80% of India?
 - ❑ Prof. Alwin W. Yeo; Terribly remote Barro?

Public-Private Partnerships

Strategies, mechanisms, arrangements

Categorization

- Institutional vs. Contractual
 - Many models; many variants
- Some examples

Immediate transfer of ownership to private entity [could be partial]

- ❑ Ownership
 - Private [or jointly owned]
- ❑ Risk
 - Private party bears risk
- ❑ Buy-Build-Operate [BBO]
 - Asset sale or divestiture
 - Complete or partial
 - Access for disadvantaged communities [here; rural poor only]
 - **USO obligations**; not always met

☐ Build-Own-Operate [BOO]

- Numerous Greenfield projects; both successful and not so successful
 - ☐ India: Infrastructure sharing; mobile towers
- Lesson from Nepal [only as a case and not meant to discredit anyone]
 - ☐ Difficult areas [not so difficult areas as well; flat, hills, mountains; electricity]
 - ☐ Political unrest
 - ☐ USD 12m least-cost subsidy for RTN in EDR
 - ☐ 2 public phones each in 534 VDC
 - ☐ 5 year exclusive license; open 8 hours/day

Justifiably closed

July-August 2005: Average minutes of use/day = 0.36

- PPP in trouble due to weak political-regulatory environment
 - Major exclusivity violations by incumbent
 - Arbitrary interconnection charges on RTN
 - X 18, then x6
 - Technology choice

Immediate or subsequent public ownership

- Ownership
 - Ultimate public ownership
- Risk
 - Private party bears bulk of risk during period of building and concession duration
- Build-Own-Operate-Transfer [BOOT]
 - Private party profit from operation
 - Public party gets asset for little effort at a future date
 - Numerous examples

☐ Build-Operate-Transfer [BOT]

- Concession or franchise; private party runs financial risk of sustainability

☐ Build-Transfer-Operate [BTO]

- BTO less risky for private party as investment recouped early
- Thailand example
 - ☐ State wanted to keep ownership of telcos, but needed private investment
 - ☐ Exclusive concession contracts; 25-30 years

Thailand BTO PPP

- Fixed concessionaires had subscriber limits imposed; unable to grow
- Loses
- Mobile concessionaires had no limits
- Profits

Source: Company reports

Life-cycle public ownership

- ❑ Design-Build-Operate [DBO]
 - Ownership with public party
 - Risk with public party
 - Role of private party minimal
- ❑ Design-Build-Finance-Operate [DBFO]
 - Private party risk is greater
- ❑ Helpful when politically difficult to bring in private investments
- ❑ Numerous examples
 - Usually shorter periods

Strengthening Public-Private Partnerships

Crucial elements of success

- ☐ Clear framework for life-cycle of PPP
- ☐ Understanding of innovative PPP models
- ☐ Appreciate opportunities PPPs have for unlocking value

Clear framework for PPP life-cycle

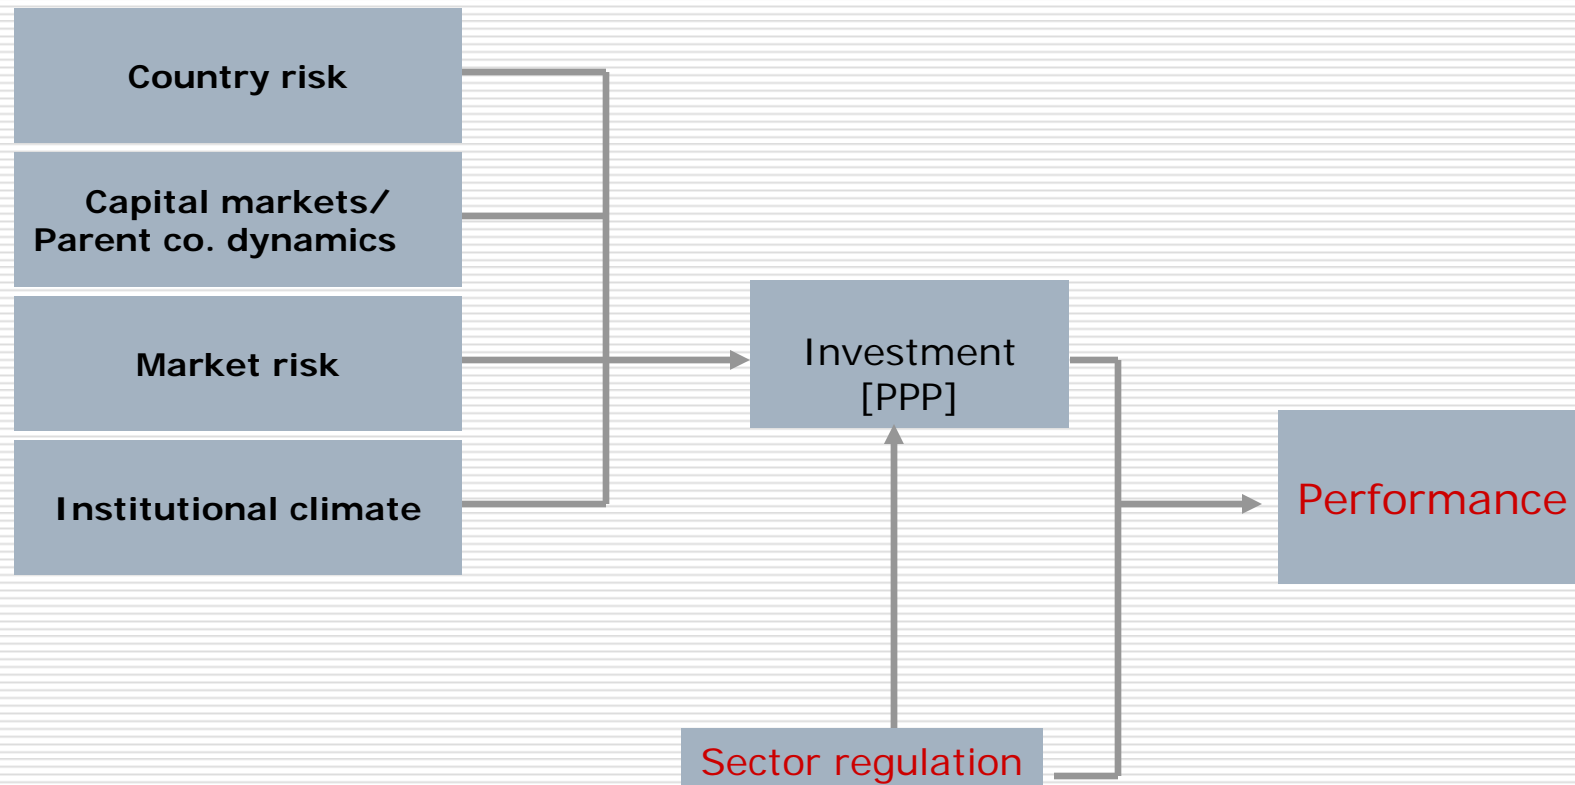

- ❑ Need clear framework for
 - Policy
 - Legal
 - Regulation
- ❑ Estache and Pinglo (2004)
 - Calculated the risks associated with the possibility Government's dishonoring contracts → Cost of capital may increase by up to 2 to 6 percentage points depending on the country or region
 - ❑ The Nation; 13 December 2007: PTT, Thailand's largest Oil & Gas firm might be de-listed; GOT might have to pay approx USD 30 billion to buy back shares → If SC decides 'wrongful' privatization

-
- ❑ LIRNEasia work in the region measure TRE; a perception score on the regulatory environment for telecom
 - ❑ Consider 5 dimensions
 - GATS Regulatory Reference Paper [International legitimacy]
 - ❑ Market entry
 - ❑ Scarce resources
 - ❑ Interconnection
 - ❑ Anticompetitive practices
 - ❑ Universal service
 - ❑ Add: Tariff regulation

Causal chain

TRE score on tariff regulation, 2006

Min 1; Max 5

Source: Samarajiva, 2007

Harsha de Silva, LIRNEasia, 13 December 2007

Understanding innovative models

- ☐ Deviate from the traditional models
 - Bundling
 - ☐ To provide access to disadvantaged communities by adding 'advantaged communities'
 - Vertical integration
 - ☐ Multi-tier approach; M. A. Paul
 - Take-or-pay
 - ☐ SPV to link with RTN and Telecentre
 - ☐ Wholesale purchase guaranteed; retail supply guaranteed
 - Prof. Kalli Kan's Wireless city example
 - ☐ Variant of BOO; Municipality participation [and regulation]

Role for ESCAP [and others]

Important

- ☐ Understand 'reality' of access issues
 - When and where PPP
 - Importance of market mechanisms
 - We heard today
 - ☐ "Government must subsidize"
 - ☐ "Without Government support nothing is possible in ICT"
- ☐ Create awareness
 - Informed decision making

Understand 'reality'

- ❑ Market efficiency gap vs. access gap
 - Prof. Alwin W Yeo's eBario project
- ❑ Telecentres vs. mobile
 - "Telecentres, full of computers but without customers ... A common question in many parts of the world"; Telecentre.Org, December 2007

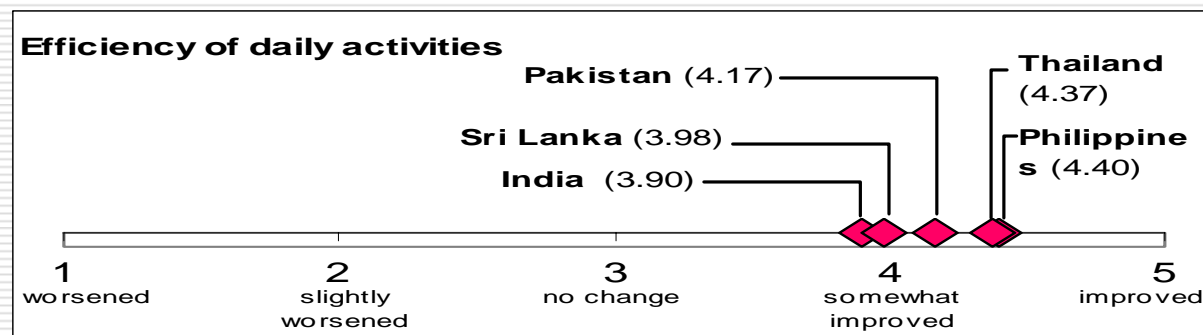

Create awareness

Korea; Dr Doojin Choi: No.1 DOI; wide-spread use

- Among all stakeholders
 - Public and private entities
 - PSocialPP [Prof Chapagain, eBarrio]
 - Disadvantaged communities; benefits of access “demandability”

From 2006 BOP survey...

Source: LIRNEasia

Harsha de Silva, LIRNEasia, 13 December 2007

Important

- Understand 'reality' of access issues
 - When and where PPP
 - Importance of market mechanisms
- Create awareness
 - Informed decision making
- Build capacity
 - Particularly in the public-sector to negotiate with private sector on PPPs
- Provide, **where necessary**, funding for targeted subsidies

Thank you.
